

Rackspace

Looking for more than just colocation?

If you're looking to host multiple servers then you may find it more cost efficient to rent an area of rackspace rather than colocate individual servers. You get all the benefits of datacentre colocation plus the added benefit of having a reserved area of the datacentre - where you can colocate any combination of equipment.

All our rackspace packages have selectable power bands; as you want to colocate more servers, you can scale the power allocation upwards.

Our rackspace packages are available in a number of sizes, perfect to match any requirement.

Rackspace options

Quarter Rack

A full 11U of space provided with 2 amps, 3 amps or 4 amps of power

Lockable Quarter Rack

As above, but rack space is provided in your own dedicated lockable cabinet

Half Rack

A full 22U of space provided with 4A, 6A or 8A of power

Lockable Half Rack

As above, rack space provided in your own lockable cabinet

Full Rack

Racks of 42U and 47U are available with 8A, 12A or 16A

We also include a 48-port switch on all full rack packages!

Benefits of rackspace

- FULL Remote hands support for all rackspace packages.
- Full access to the rack
- Reverse DNS
- Easy scaling between power levels - just give a month's notice

- Short contract periods
- Optional subnet IP allocation (subject to necessary justification) or a dedicated IP range
- Optional gigabit ethernet feed
- Optional PAC tag allocation, allowing 24/7, unbooked access to the rack for you and your staff

Additional benefits of lockable rack space

- Lockable quarter, lockable half and full rack packages give you complete control over the rack. You can install shelves, adjust rack rails and subdivide as you wish.
- We install a PDU in your rack and you add to this as per your requirements.
