

Additional services

A1isp is able to offer a number of optional services to ensure your colocation experience is totally free of hassle. Contact your a1isp account manager to find out pricing and availability.

Firewalling

We can perform transparent firewalling on the network, adding security without the added complexity of external hardware or the risks of software firewalls.

VOIP gateway colocation

If you want to colocate a VOIP gateway on our network, it's no problem! We can provide space for antennas and cabling. Our datacentres have good signal coverage for all UK mobile networks.

cPanel

Rent a cPanel licence from us and effortlessly run numerous virtual sites on your server - easily allow your customers to run their websites. [cPanel Server Details >>](#)

Service Monitoring

We can monitor your service and your key services 24/7 and alert you by email, text and phonecall whenever there's a problem.

Automated Backups

We can provide facilities for you to back up critical data. Offsite storage for your information adds to security and resilience.

Remote Power Switching

Gain full control of your server by rebooting it as and when required.

Dedicated KVM

Although we operate a bookable KVM with all colocation packages we understand that sometimes you want the peace of mind to know that your server is instantly reachable even if it's overloaded, crashed or unstable. We can provide a dedicated KVM with all colocation and rackspace packages.

Small Business Continuity

If you're going to be abroad, and need someone to keep an eye on things, we'll happily step in and keep an eye on things. We can even handle telephone calls, emails and save you from those inconvenient calls when you just want to be laying on the beach!

Full Server Management

We can manage Linux, VMware and Windows servers for you. We'll diagnose faults, keep services up to date, arrange engineer visits and let you concentrate on what you know best: your business. [Server Management Details >>](#)
