

## Dedicated/VPS Server Rental

Your first server may have been a shared server and you might have outgrown it. Perhaps you need a backup server to supplement your existing colocation. Whatever your need, A1isp is able to provide a fully maintained server, specified to your exact requirements. Whether you need fully dedicated hardware or the convenience of a VPS (virtual private server), we're able to provide great hardware at great prices.

Intel Xeon/i7 Servers

We are now specifying dedicated servers with Xeon (i7 family) processors and chipsets. The newest family of processors from Intel provides immense performance increases in processor and memory speeds.

Custom Specifications

We'll provide the exact specification you require for any of our dedicated servers. Whether it's a database server with fast drives or a webserver with plenty of power, we'll advise you on the best hardware choices for your budget, and configure it to your exact specification

Operating Systems

We can install any operating system or control panel you require.

Contact Us

We can have your dedicated server up and running within a few days.
