

Colocation Services

1U colocation >>2U colocation >>3U, 4U, 5U colocation >>

When considering colocation there are some important factors that you should consider to make sure you get the best service you require.

Measuring true power usage

Our colocation packages includes half an amp of power as standard. You might look at the specifications of your server and see it has a maximum power supply rating of 300W, 500W or more; this does not mean your server needs the equivalent power allocated to it. Most servers draw a lot less than the maximum rating of the power supply. For more information see our FAQ section on your server's power consumption.

Quality and plentiful Colocation bandwidth

A1isp provide quality bandwidth within both our Redbus colocation facility in London Docklands and our Bluesquare colocation facility in Maidenhead. Our customers always have the ability to burst to port speed at any time. Coupled with the fact your equipment will be directly connected to a switch with plenty of spare capacity, you'll have superfast, quality bandwidth that will not degrade no matter what time of day it is.

Remote hands staff available 24/7 for all colocation customers

Both our colocation facilities have dedicated staff ready to spring into action at a moment's notice. If your collocated server crashes, needs rebooting or needs disks or tapes swapped, it's no hassle at all. Just email, call or raise a ticket on our portal - we'll do the rest. We'll automatically direct the staff to our equipment and they'll soon have you back up and running. We'll manage the staff to ensure your request is actioned efficiently and quickly.

Limitless access to your Colocated equipment - and remote KVM too

You'll be able to visit your collocated equipment whenever you need. Site security ensures only confirmed, registered guests may visit our locked suite - and you will be one of them. Our sites have convenient parking and easy access from major transport routes. Furthermore, you'll be able to work on your equipment as you please. You can book an IP-based KVM, so if it's a simple fix you need to make, save yourself the journey, book the KVM and do the work from home or office!

```
var rm = escape(window.document.referrer.replace("&", "**"));
var pm = escape(window.document.URL.replace("&", "**"));
var sm = 'http://srv0.velaro.com/visitor/monitor.aspx?siteid=4031&autorefresh=yes&origin=';sm=sm+rm+'&pa='+pm+'>';
document.write('
```

Convenient purpose built Colocation facilities

Our colocation facilities are maintained at their temperature regardless of the temperature outside. Power is supplied from multiple sources with a generator ready to spring into action the moment it's needed. Generators at both sites are covered by comprehensive policies allowing sites to stay online indefinitely if there is any interruption to the public network.

It's not just power that's fully specified - the network links are diverse and multiple onto the major distribution networks of the UK. For example, our Bluesquare facility regularly sees 2ms pings to the London switching network LINX - meaning that you don't need to be in London to benefit from access to that network. And with redundant fibre paths, over diverse links, you'll have peace of mind too.

What are you waiting for, call A1isp today and arrange a viewing of YOUR new colocation facility!

1U, 2U, 3U or more!

We believe we can cater for any need, whether it's a 1U server for remote backup or a large blade server providing hundreds of virtual servers. Our packages are extremely cost effective and we believe the quality of our service to be world class.

We're so confident in our ability to deliver, we will ask no more of you than a month by month contract. With no setup fees on colocation packages, we can have you installed in a rack within just a few days.

Call us today and join the customers we have that have never moved away!
